

The screenshot shows the VS Code editor with the file explorer on the left displaying the project structure. The file explorer shows a 'frontend' directory containing 'node_modules', 'public', 'src', 'assets', 'components', 'data', and 'users.js'. The 'components' directory is expanded, showing 'AllUsersComponent.jsx' and 'SingleUserComponent.jsx'. The 'SingleUserComponent.jsx' file is selected and its content is displayed in the editor. The code defines a 'SingleUserComponent' function that takes 'user' and 'onDelete' as props. It returns a JSX element consisting of a table row with columns for user name, email, phone, and address. A 'Delete' button is also present, which calls 'onDelete' when clicked. The button has a red background and white text. The component is exported as the default export.

```
1 // src/components/SingleUserComponent.jsx
2 import React from "react";
3
4 function SingleUserComponent({ user, onDelete }) {
5   return (
6     <tr>
7       <td>{user.name}</td>
8       <td>{user.email}</td>
9       <td>{user.phone}</td>
10      <td>{user.address}</td>
11    </tr>
12    <button
13      onClick={() => onDelete(user.id)}
14      style={{ background: "red", color: "white", border: "none", padding: "5px 10px",
15        borderRadius: "5px" }}
16    >
17      Delete
18    </button>
19  </td>
20 </tr>
21 );
22
23 export default SingleUserComponent;
24
```

The screenshot shows the VS Code editor with the file explorer on the left displaying the project structure. The file explorer shows a 'frontend' directory containing 'node_modules', 'public', 'src', 'assets', 'components', 'data', and 'users.js'. The 'components' directory is expanded, showing 'AllUsersComponent.jsx' and 'SingleUserComponent.jsx'. The 'AllUsersComponent.jsx' file is selected and its content is displayed in the editor. The code defines an 'AllUsersComponent' function that takes 'padding', 'border', 'borderRadius', and 'marginBottom' as props. It returns a JSX element consisting of a button with text 'Delete All Users' and 'Add All Users'. Below the button is a table with columns for user name, email, phone, address, and action. The table is populated with data from 'userList'. A 'Delete' button is also present, which calls 'onDelete' when clicked. The button has a red background and white text. The component is exported as the default export.

```
6 function AllUsersComponent({
7   padding: 10px 10px,
8   border: "none",
9   borderRadius: "5px",
10  marginBottom: "20px",
11 }) {
12   <div>
13     <button
14       <div>
15         {isAdded ? "Delete All Users" : "Add All Users"}
16       </button>
17
18       {userList.length > 0 && (
19         <table border="1" cellPadding="10" style={{ margin: "auto" }}>
20           <thead>
21             <tr style={{ background: "#eee" }}>
22               <th>Name</th>
23               <th>Email</th>
24               <th>Phone</th>
25               <th>Address</th>
26               <th>Action</th>
27             </tr>
28           </thead>
29           <tbody>
30             {userList.map((user) => (
31               <SingleUserComponent key={user.id} user={user} onDelete={handleDeleteUser} />
32             ))}
33           </tbody>
34         </table>
35       )}
36     </div>
37   </div>
38 );
39
40 export default AllUsersComponent;
41
```

```
1 // src/components/AllUsersComponent.jsx
2 import React, { useState } from "react";
3 import SingleUserComponent from "../SingleUserComponent";
4 import { users as usersData } from "../data/users";
5
6 function AllUsersComponent() {
7   const [userList, setUserList] = useState([]); // initially empty
8   const [isAdded, setIsAdded] = useState(false); // track if users added
9
10  const handleAddUsers = () => {
11    if (isAdded) {
12      // if users already added, delete all
13      setUserList([]);
14      setIsAdded(false);
15    } else {
16      // add all users
17      setUserList(usersData);
18      setIsAdded(true);
19    }
20  };
21
22  const handleDeleteUser = (id) => {
23    const updatedList = userList.filter((user) => user.id !== id);
24    setUserList(updatedList);
25
26    // if all users deleted, toggle back button
27    if (updatedList.length === 0) {
28      setIsAdded(false);
29    }
30  };
31
32  return (
33    <div style={{ textAlign: "center", marginTop: "30px" }}>
```

```
1 // src/data/users.js
2 export const users = [
3   { id: 1, name: "Alice Johnson", email: "alice@example.com", phone: "555-1234", address: "123 Main St" },
4   { id: 2, name: "Bob Smith", email: "bob@example.com", phone: "555-5678", address: "456 Elm St" },
5   { id: 3, name: "Charlie Brown", email: "charlie@example.com", phone: "555-9101", address: "789 Oak St" }
6 ];
```
